[Green Building: Intriguing Solar Power Outside Promotes Collaboration Inside MITRE Center - Case Study](#)

Employee collaboration was a central goal for the MITRE Center building -- and its planners started the collaboration with the design process. Owners, builders, architects and vendors worked together to craft a sustainable design. This LEED Silver candidate's "green" elements create a synergy that brings together energy efficiency and comfort. Financial incentive programs worked in unison to support the integration of renewable energy into the building. Photos.
