I went to the press conference they had this morning. I'd never heard of the Institute for Trade, Standards, and Sustainable Development (ITSSD) before, but their president refers to the US pharmaceutical industry as "us."

Two press releases follow, the first is from ITSSD and the second is from a group called Defenders of Property Rights.

ITSSD: Brazil Will Break International Law with Theft of U.S. Drug Patents - White Paper Finds That Brazil Patent Seizure Threatens Global Trade and Public Health

Institute for Trade, Standards, and Sustainable Development
Press Release
Thursday June 16, 1:00 pm ET

WASHINGTON, June 16 /PRNewswire/ -- With a number of other non-profit groups, ITSSD is calling attention to Brazil's threat to break U.S. patents on American AIDS drugs used as part of Brazil's government-funded treatment program. After reviewing the initial official statements coming out of Brazil, ITSSD concluded that Brazil would be in violation of the Trade Related Aspects of Intellectual Property or TRIPS Treaty, if it pursues this course of action.

It is questionable if Brazil's government could invoke the "health emergency" clause of the Doha Declaration amendment to the TRIPS Treaty, allowing developing countries to temporarily suspend patents on products needed to alleviate a legitimate health crisis. Examples of such emergency often include response to an anthrax attack in the U.S. or a sudden outbreak of a treatable disease in Sub-Saharan Africa. Brazil's AIDS infection rate of 0.6% has parity with that of the United

States at 0.5%. For comparison, the AIDS infection rate in Swaziland is 38.6% according to the impoverished African nation's Health Ministry.

Brazil is a major United States trade partner, with more than \$35 billion in trade occurring between the two nations each year. At the same time, Brazil is by far the worst abuser of intellectual property rights in the Americas. According to the USTR, piracy losses to American businesses add up to nearly \$1 billion in losses annually.

"Brazil is about to contravene a major trade agreement in a thinly veiled effort to bolster its national pharmaceutical industry," said Ambassador Slavi Pachovski, president of the Institute for Trade, Standards, and Sustainable Development. "If Brazil is allowed to move forward without penalty, it will send economic and trade repercussions throughout the world and puts the global efforts to fight the AIDS epidemic at risk. Brazil cannot be allowed to act in this way."

ITSSD's white paper identified Brazil as an emerging global power, with ambitions at a permanent UN Security Council seat and its domestic pharmaceutical industry primed to reap the benefits of years of research and hundreds of millions of dollars in American pharmaceutical research. Widespread coverage of Brazilian President Lula's recent visit to African nations has him discussing future AIDS drug trade programs - a capability the South American country does not yet have.

ITSSD's paper, co-authored by Pachovski and ITSSD's CEO, Lawrence Kogan concluded that Brazil's threatened patent theft will not only harm fundamental research but would also preclude Brazilian industry from cutting-edge innovations essential to bolstering the country's emerging markets.
