IP based innovation can help Brazil.

ITSSD: IP-based innovation, not IP opportunism, is in Brazil's best interests

PRINCETON, N.J.-- While the government of Brazilian President Luiz Inacio Lula da Silva works diligently to appear as a political moderate and a dependable market-friendly force within a highly volatile and blatantly populist region of the world, international business, trade and regulatory expert **Lawrence A. Kogan of the ITSSD** reports how Brazil, under Mr. Lula's leadership, is actually working to undermine exclusive private property rights and free enterprise globally.

In a new article appearing in the peer-reviewed **International Journal of Economic Development (IJED)**, Mr. Kogan documents how the Brazilian government, assisted by ideological activists, academics and politicians, has brazenly led a bloc of emerging and less developed economies to craft a highly controversial anti-intellectual property right (IPR) legal framework.
